Computer Repairs and Maintenance

Blue Screen Systems provides technical support, system repairs and upgrades. Services include remote desktop support and maintenance to all brands of computer equipment. We will identify the problem and then offer solutions available to repair your system.

Wireless and Wired Networking

We can set up your home network using wireless and wired technologies. Share your internet connection, printers and other peripherals. With wireless local-area network (WLANs) you have freedom of movement and will always be connected. We can not only set up your wireless network, but will be able to secure it against unauthorised access. We will also do a wireless audit to ensure good signal strength and complete coverage of your residence.

Data Backup and Restore Services

Data backup solutions include automated back-ups using optical discs, external hard drives or backing up to another computer. **Blue Screen Systems** also provides secure, online, remote data backup solutions. The automatic data backup continuously operates in the background when your computer is idle. Each data backup is compressed and encrypted on your PC and then stored offsite on our secure remote backup servers. You can easily restore your files in addition to sharing files with others.

Data Recovery

Hard drive crash or accidentally deleted files? Memory card corrupt? Optical disc not working? Turn off your computer immediately and call us. We can help you retrieve lost data. (conditions apply)

Notebook Data Backup

Notebook computers are the perfect tool for busy on-the-go people -- powerful, compact and portable. But those same attributes make them the most vulnerable to a variety of data loss risks. With tiny components and connections packed in a compact case, laptops are delicate and can easily overheat, suffer hard drive failures or power outages, making the data they store extremely vulnerable.

Laptops are also frequently dropped and damaged, lost or stolen from cars, airports, offices and homes.

Blue Screen Systems provides reliable and easy solutions for getting mobile notebook users to perform regular backups.

Spyware Removal and Protection

Browsing the internet highway brings its own hazards in the form of spyware which slows down your computer, causes pop-ups and collects personal information regarding your surfing habits, email addresses, banking info, etc. We can scan your computer and remove all spyware threats. The latest spyware software will be used to provide you with continuous protection against all spyware threats.

Anti-Virus Protection

You need protection against viruses and worm attacks. Protect your email and instant messaging. We can install anti-virus software and configure it to provide total protection. We will also ensure that the software continuously updates itself with the latest virus definitions to protect your system.

Windows Media Centre

Let us show you how to share music, videos and TV across your entire home. Record TV shows, watch, pause and rewind TV in other places. Extend your Media Centre anywhere in your home with the Xbox 360 and your wired or wireless network.

Digital Hardware Setup

We can show you how to connect your digital cameras, PDAs, MP3 Players and other electronic devices to your computer. We will show you how to use your latest toy to the fullest. Whether it's for downloading, sharing or printing photos and music, **Blue Screen Systems** can help you.
